The far-infrared lines of ¹³C carbon have been measured by Laser Magnetic Resonance (A. L. Cooksy, R. J. Saykally, J. M. Brown, and K. M. Evenson, 1980, *Astrophys. J.* **309**, 828). The hyperfine intervals of G. Wolber, H. Figger, R. A. Haberstroh, and S. Peneselin, 1969, *Phys. Lett.* **A29**, 461, and the far-infrared lines were used for the line frequencies. Intensities were calculated using the free electron g factor.
