The laboratory spectra of Halfen D.T., *et al.* Ap. J. 687(1), 731-736, 2008, were combined with the data of McCarthy, M. C., Mohamed, S., Brown, J. M., and Thaddeus, P. 2006, Proc. Nat. Acad. Sci., 103, 12263, in a fit to a Hund's case (b) Hamiltonian with fine and hyperfine structure parameters. Additional hyperfine parameters improved the fit considerably and one rotational transition was excluded in the catalog analysis (see archive). The dipole moment for the main isotopomer was taken from D. J. Phelps and F. W. Dalby, 1966, Phys. Rev. Lett. **16**, 3.
