The observed lines are from: Y. Endo, S. Saio, and E. Hirota, 1984, J. Chem. Phys. **81**, 122. The dipole moment was calculated by: C. F. Jackels, 1982, J. Chem. Phys. **76**, 505. While there is a b-type dipole allowed by symmetry, its value was set to zero for this prediction. The transitions with  $\Delta K \neq 0$  have at least 10 GHz uncertainty. The quanta are N,K,v,t,F where v = 0 for  $\Lambda = 1$  and v = 1 for  $\Lambda = -1$ . The spin designation, *t*, is
