The dipole moment for the ground state is reported by Lovas *et al.* 2003, J. Mol. Spec. **222**, 263-272, these values were assumed for all vibrational modes. The experimental frequencies are from Lovas *et al.* and Widicus *et al.*, 2004, J. Mol. Spec. **224**, 101-106. The ν quantum numbers assign the following: 0 is the ground state, 1 is ν_{30} , 2 is ν_{29} , 3 is ν_{28} , the labels and energies of these states are based on relative intensities of the millimeter and submillimeter wave spectra. The partition function is given by the sum over states, for ONLY those states given. Note that there are other states populated at 300 K not explicitly listed.
