The spectrum was calculated from a combined fit of rotational spectra of all four isotopic species $^{79,81}\text{Br}^{16,18}\text{O}$ as well as available infrared spectra. The fit is described by B. J. Drouin, *et al.* 2001, *J. Mol. Spectrosc.* **205**, 128-138. The data and parameter files have been deposited with the journal. Note that the quantum number field has been changed. In this version it is N , Λ , v , $J + 1/2$, F . The parity is given by the sign of Λ .
